## Profile

I am a Mechanical Engineering student at MITAOE with a strong passion for programming and building impactful digital tools. Starting as a curious teenager, I taught myself software and web development, which led to creating full-fledged apps and freelancing opportunities. I blend engineering principles with software skills to build smart, real-world solutions – from mechanical models to live web platforms.

## Employment History

### Freelance Web Developer, Self-Employed

*January 2024 – Present*

- Built custom websites and full-stack apps for clients using modern tools like Django, React, and Bootstrap.
- Delivered tailored solutions like automation tools and student-focused web platforms.
- Handled client communications, requirement gathering, and agile development cycles.

### Mechanical Engineering Intern, Snehal Autoparts, Jalgaon

*June 2023 – August 2023*

- Interned at a manufacturing facility specializing in automobile drum brakes, including brake back plates, brake shoes, brake pads, and wheel cylinders.
- Observed and assisted in production stages like phosphating, blanking, shot blasting, welding (including MDMF welding), dimensional inspection, painting, and final assembly of drum brake systems.
- Developed a practical understanding of mechanical fabrication and process flow, and gained insight into quality standards in automotive manufacturing.

## Education

### B.Tech in Mechanical Engineering, MIT Academy of Engineering (MITAOE), Pune

*June 2023 – August 2023*

### Self-Taught Software & Web Developer Independent Learning (Since Teenage)

- Gained proficiency in both front-end and back-end development through real-world projects.
- Built full-stack applications including a portfolio site, rent management system, and report generator.
- Learned via online resources, documentation, and practice, becoming skilled in Django, React, and version control with GitHub.
